

Interview with

JIM ILER

**CHIEF OPERATING OFFICER (COO)
TOK BALI SUPPLY BASE (TBSB), KELANTAN**

Could you give us a quick update on the current progress of the Tok Bali Supply Base (TBSB)?

TBSB has obtained all licenses and permits to operate as one of only three Petronas licensed Supply Base in Malaysia. Our wharf is complete along with bonded warehouse and open yard space. Our first anchor tenant, a production sharing contract (PSC) company, is due to move in this July. We are also in the position to provide bunkering services and manage crew changes, cargo as well as provisions. There has been an extensive amount of work to get us to where we are today, but we had support along the way from MITI, MIDA and Petronas, along with other agencies and individuals.

What is your view on the current climate of the Oil, Gas & Energy scene in Malaysia? Can you elaborate on some of the challenges that the Industry is facing at the moment?

With 33 years in the Oil & Gas Industry, this is the third down turn I have been faced with.

This is my first year in the Industry working on the Service Provider side. In any business when profit margins drop drastically, that business needs to look at ways to bring margins back. This is either by cutting their spending, reducing staff, increasing efficiencies, investing in new technologies, among others.

Jim Iler
Chief Operating Officer (COO),
Tok Bali Supply Base (TBSB)

How is TBSB coping with these challenges that you have mentioned; and as the captain of the ship, what are your plans to address these issues?

From TBSB's view, this challenging time for most companies is actually helping TBSB as we can offer our supply base with instant cost savings due to our base location in proximity to the Oil & Gas Fields. Many of the locations in the Joint Development Area (JDA) and North Malay Basin (NMB) are half the distance to their current supply base, resulting in very substantial fuel savings & vessel run time. TBSB understands the challenges these PSC's and service companies are facing. Therefore, we have decided to offer substantial discounts off our scheduled rates during this downturn.

Finding the right talent and retaining them, is a perennial challenge for countries and businesses worldwide. What is TBSB's approach towards talent development?

At TBSB, we believe that our people are our main asset. And, as a 96%-Bumiputera owned company, hiring from within the nation is a priority. We have a thorough interview process and once an employee is hired, we have an onboarding process. We have sent our personnel to numerous training courses, continue to do in house training, and encourage our staff to do continuous education or training outside of work as well. We also use reward and recognition from Senior Management on down. We conduct meetings three times a week, where all staff have the opportunity to share their comments, recognise a co-worker and recognise safety performance. Safety is the pinnacle. It is the first thing we talk about every morning and included in every meeting. Talent development is and will be forever ongoing.

Continued from page 1

INTERVIEW WITH JIM ILER

Given the current global situation on the industry, why do you think Malaysia still pose as an attractive investment destination for Oil & Gas and Services Equipment providers to establish their businesses?

Malaysia is better for investment compared with other Oil & Gas areas around the world because of the lower cost of getting Barrel of Oil Equivalent (BOE) out of the ground, with the cost for BOE in Western South China Sea at US\$30-\$39. In the Gulf of Mexico however, the range is between US\$50 and US\$59, and north of US\$50 for unconventional drilling. That said, Malaysia has established a good foundation of service companies and talent to go along with them and with competitive rates. Malaysia also has an extensive infrastructure in place with pipelines and gas plants. Another crucial factor is Malaysia's proximity to energy-hungry nations such as China and Japan.

Analysts opined that in response to the new oil price environment, companies operating in this sector will push them to further improve cost efficiencies. But for others, such as companies in the business of petrochemicals, the effect is fairly positive. Do share your thoughts on this.

Exactly, petrochemical companies will benefit from the lower pricing. While I am thankful some companies are beneficiaries of the low oil price environment, my goal is to do whatever I can to encourage E&P activities, including cheaper rates. Also,

having a supply base close to their facilities can help trim logistic cost. Logistic costs, comprising vessels, helicopters, supply bases and personnel, typically make up 30% of the overall costs related to a drilling campaign. Most PSC's have budgetary constraints, so if their supply base and logistics costs can be reduced, this could be the difference between a Go and No-Go drilling campaign. While WTI prices have indeed slumped to US\$46/bbl, prices have since recovered and are hovering around US\$60/bbl. Therefore, I think it is only a matter of time before E&P activity picks up again. It is worth noting that BHI posted a gain in drilling rigs on June 26th, its first in 29 weeks, to 859 active drilling units. PSC's have already started on work with service companies to streamline rates, and offer

newer and cost-effective technologies. In the near future, I see the PSC's working together to share resources. Petronas, along with the MOGSC group, is working hard with what is called CORAL 2.0 to look into many of the items I mentioned above. All of the above could kick start new projects.

Lastly, what new developments can we expect from TBSB, going forward?

TBSB is focused on attracting new clients seeking warehouse space, open yards and offices in the Supply Base. We also plan to build a commercial port in the near future, a development we believe to be crucial to northeast Peninsular Malaysia and could potentially bring positive spillovers to the region.

“ TBSB is focused on attracting new clients seeking warehouse space, open yards and offices in the Supply Base. We also plan to build a commercial port in the near future, a development we believe to be crucial to northeast Peninsular Malaysia and could potentially bring positive spillovers to the region. ” JIM ILER

Tok Bali Supply Base (TBSB) - located on the north east coast of Peninsula Malaysia. TBSB is operationally ready with 500 metres of wharf and berthing for 5 supply vessels.

MPRC INDUSTRY TALK

Previous MINT Event

MINT #1: MPRC's way forward and stakeholder engagement

In this year of uncertain energy price environment, the need to understand the state of affairs in the oil & gas services and equipment (OGSE) sector and the ability of the industry to meet future challenges has become even more acute.

To this end, MPRC, led by Executive Director Dr Shahreen Madros and Industry and Market Enabler Senior Vice President Syed Azlan Syed Ibrahim, hosted an industry and stakeholder engagement session early this year to provide an overview on MPRC i.e. mandate, goals and missions and to share the updates on the current progress and achievements taking place in the OGSE sector. In the second part of the event, participants were presented with MPRC's latest initiative – the Malaysia

OGSE Catalogue 2015. This session in particular gave an in-depth explanation on the initiative which includes background information, the project timeline as well as guiding the participants on the processes involved in the data gathering exercise.

The session which took place on February 27th, was attended by 73 attendees from OGSE firms and included representatives from key government agencies such as the Economic Planning Unit, Malaysian Investment Development Authority, Ministry of Education, Malaysian Oil & Gas Services Council and Ministry of International Trade & Industry.

Key personalities from the industry including Rohaizad Darus, president at UMW Holdings Bhd and Mac Ngan Boon,

managing director at Muhibbah Engineering Bhd, Technip Malaysia's president Syed Feizal Syed Mohammad and Cekap Technical executive chairman Sofiyan Yahya ensured participants had a more profound and productive session.

In summary, the session gave an overview of MPRC's roles and missions, at the same time provided the opportunity for OGSE firms to register with MPRC and feature their company in the upcoming Malaysia OGSE Catalogue 2015. Published in the first quarter of 2015, the OGSE Catalogue serves as a practical tool to disseminate information on and promote Malaysia-based OGSE firms at major international oil and gas exhibitions and conferences, foreign trade missions and at selected MIDA and MATRADE global offices.

Previous MINT Event

MINT #2: AEC—demands, challenges and impact to OGSE companies

ASEAN is witnessing a major transition with the formation of the ASEAN Economic Community (AEC), a closer integration of the grouping's 10 member states, by the end of this year. Aimed at creating a single market with freer flow of capital, goods and services and talent across borders, this will make businesses in this region more competitive, create more jobs and in turn, grow wealth.

But for the region to realise this potential, raising awareness is crucial. Whilst large corporations are set for the economic union, the challenge lies in getting the buy-in from small and medium enterprises that account for at least 90% of jobs in the region.

Pursuant to this, MPRC hosted its second MPRC Industry Talk, or MINT, the "AEC: Demands, Challenges and Impact to OGSE Companies" in April, with the aim of providing clarity on and making sense of potential administrative hurdles for businesses venturing into the integrated marketplace.

The event presented a panellist session which was moderated by Syed Azlan Syed Ibrahim, Senior Vice President, MPRC, and had four panel members consisting of YBhg Datuk P. Ravindran, Senior Director, ASEAN Economic Cooperation, MITI, Rohaizad Darus, President, UMW Oil & Gas Corporation Berhad, Mac Ngan Boon, Managing Director, Muhibbah Engineering (M) Bhd, and Nan Yusri Nan Rahimy, Group Managing Director, Deleum Berhad.

Each panellist took turn to give their views and opinion which centered on; i) investment policies in ASEAN member countries; ii) identifying opportunities between Malaysia's OGSE industry and players in other ASEAN countries and beyond, as well as; iii) recognising the need to develop specialised capabilities to better compete in an open market place.

The need to up the competitiveness ante was echoed by most participants. "There is definitely a need to focus on developing capabilities towards specialised and higher technical capabilities. We cannot compete on cost alone," said a participant from Toyo Engineering Corporation.

The talk, attended by 104 participants, also received encouraging response from the industry, as indicated by the growing number of participants and positive feedback to the above-mentioned topics covered in the one-day industry engagement event.

(From left) Rohaizad Darus, President, UMW Oil & Gas Corporation Berhad, Nan Yusri Nan Rahimy, Group Managing Director, Deleum Berhad, Syed Azlan Syed Ibrahim, Senior Vice President, MPRC, Mac Ngan Boon, Managing Director, Muhibbah Engineering (M) Bhd and YBhg Datuk P. Ravindran, Senior Director, ASEAN Economic Cooperation, MITI

Upcoming MINT Event

MINT #3: Breaking Abroad - Learning from Successes

MPRC INDUSTRY NETWORKING TALK

DATE : Thursday, 20 August 2015

TIME : 2 p.m. - 4 p.m.

VENUE : G-Tower Hotel

MPRC is pleased to announce that the third instalment of its MPRC Industry Talk for 2015 will take place on Thursday, August 20. The upcoming session is designed for attendees to meet, identify and discuss opportunities for OGSE companies across the global energy landscape, and understand government-led initiatives aimed at nurturing and enhancing the growth of exports of Malaysia's OGSE enterprises. The session will be hosted by MPRC CEO YBhg Datuk Shahrol Halmi while the briefing on the Go-Ex and Mid-Tier Companies Development Programmes will be presented by YBhg Dato' Dzulkifli Mahmud, CEO of MATRADE.

MPRC @ OTC HOUSTON 2015

Specialised Marketing Missions to ASEAN and Beyond

The Offshore Technology Conference (OTC) series, held annually in Houston, Texas, USA, is one of the leading industry events in the world for the development of offshore resources, exploration and production, and environmental protection. As advances in technology play an increasingly important role in transforming the way the oil and gas industry functions, it is important for Malaysia's oil & gas services and equipment (OGSE) industry to explore how new technologies can ensure resources are efficiently utilised and turnover can be maximised.

This is crucial for Malaysia, which aspires to become one of Asia's leading O&G powerhouses by the year 2017 and therefore was well represented at the recent OTC in Houston. Malaysia's delegation comprised eminent players representing the Malaysian OGSE industry and government agencies such as MPRC and Malaysia External Trade Development Corporation (MATRADE). At the four-day conference starting 4th May, MPRC, along with MATRADE, hosted its fourth Malaysia Pavilion at the major event which attracted over 94,700 O&G attendees and had over 2,682 exhibitors representing 37 nations.

The Malaysia Pavilion showcased 19 OGSE companies, and this included leading players such as Eversendai Corporation Bhd and Muhibbah Engineering (M) Bhd. One of the Malaysia Pavilion key highlights was the Industry Talks, an open mini conference with 20 speakers from Malaysia's OGSE exhibitors and external speakers from the industry. This was in line with MPRC's long-

standing objectives: to enhance awareness of Malaysia's OGSE capabilities and forge meaningful partnerships that will take the country a step closer towards becoming Asia's top energy player. YBhg Datuk Anuar Taib, PETRONAS' Senior Vice President, Upstream Malaysia also led a VIP tour of the Malaysia Pavilion. YBhg Datuk Anuar was in Houston to launch OTC Asia 2016 that is scheduled to take place in Kuala Lumpur in March 2016.

MPRC is pleased to note that during OTC Houston, Dagang Nexchange Bhd signed a Technical Framework Understanding to set up the first directional drilling company in Malaysia in cooperation with one of the world's largest oilfield service providers, Baker Hughes. The Malaysia Pavilion also witnessed a Joint Development Framework signing ceremony between MIT-Technologies and Haliburton, one of the world's largest providers of products and services to the energy industry, for the latter's Intelligent Circulation Well Drilling.

If you wish to participate under the Malaysia Pavilion at OTC Houston 2016, please email us at pbo@mprc.gov.my or contact **Dimple Kerisnin** at **012 287 9395**

In a bid to raise awareness and promote the capabilities of Malaysian OGSE firms, MATRADE will be organising a series of specialised marketing missions (SMM) which will also include visits and meetings with relevant O&G companies.

Upcoming SMMs are as follows:-

- **SMM to Jakarta, Indonesia**
10-11 August 2015
- **SMM to Dili, Timor Leste**
12-14 August 2015
- **SMM to Nay Pyi Taw and Yangon, Myanmar**
26-28 August 2015
- **SMM to Rio de Janeiro, Brazil, & Bogota, Colombia**
26-31 October 2015
- **SMM to Vietnam**
1-3 December 2015

To know more about the SMMs, kindly email us at pbo@mprc.gov.my or contact **Wan Nazhif** at **019 3198 498**

“ This was in line with MPRC's long-standing objectives: to enhance awareness of Malaysia's OGSE capabilities and forge meaningful partnerships that will take the country a step closer towards becoming Asia's top energy player. ”

INAUGURAL PUBLICATION OF MPRC100

MPRC is pleased to present its inaugural MPRC100 publication. Launched on June 10, the MPRC100 grades the country's 100 top performing listed and unlisted companies in the oil & gas service and equipment (OGSE) sector based on their revenue for 2013.

The event, led by Ir. Dr. Shahreen Madros, executive director at MPRC, was widely covered by Malaysia's media organisations including Bernama, The Edge, The Star, The Malaysian Reserve, The Malay Mail, Utusan, Berita Harian, The Sun Daily, RTM and TV3.

SapuraKencana Petroleum Bhd topped the 2013 list, followed by Malaysia Marine and Heavy Engineering Holdings Bhd and Dialog Group Bhd in the second and third spots, respectively. The list recognises

the top financial performers in the OGSE industry and it is envisaged that the rankings will serve as a reference point for players to identify market trends and measure their own performance against rival companies.

The rankings are derived using the following methodology. Companies are ranked by their revenues for the financial year ending 2013 and this is compared with the companies' respective revenues in FY 2012, according to Syed Azlan Syed Ibrahim, MPRC's senior vice president who presented the key findings and analysis and methodology for the top 100 company ranking. Financial information from the companies selected for the rankings are obtained from the Companies Commission of Malaysia's Corporate and Business Information Data and Malaysia's stock exchange earnings filings. The top 100 companies are also Petronas-licensed firms.

In addition, the MPRC100 also provides an in-depth analysis of the OGSE sector based on analysis done by MPRC's Industry and Market Enabler (IME) pillar, focussing on both the top 100 companies and the industry to better capture the growth and trends of the sector. The 2014 MPRC100 edition will be published in Q4 this year and annually thereafter.

IME is tasked with managing MPRC's in-house research capabilities, providing in-depth analysis and identifying market trends and developments in external markets and Malaysia's OGSE sector. IME also serves to provide data analysis and insights aimed at supporting other divisions within MPRC and to external stakeholders that include, but are not limited to, OGSE companies, investors, policymakers, regulators, financial institutions and trade associations.

Ir. Dr. Shahreen (right) and MPRC Senior Vice President Syed Azlan Syed Ibrahim, at the media briefing and launch of MPRC100 publication

MATRADE Appoints YBhg Dato' Dzulkifli Mahmud as New CEO

Malaysia External Trade Development Corporation (MATRADE) announced the appointment of YBhg Dato' Dzulkifli Mahmud as the agency's new chief executive on June 15, 2015, succeeding YBhg Datuk Dr. Wong Lai Sum. Dzulkifli has a background of over 30 years in civil service, of which he spent 21 years serving as MATRADE's trade commissioner in Milan, Rotterdam and Dubai before being promoted to deputy CEO for the trade and services promotion division in 2013. In this role, he helped to accelerate the growth of trade promotion activities in the following

segments: Oil & Gas, Health & Environmental Products, Electrical and Electronics, as well as Biotech & Halal and Food.

MPRC welcomes the appointment of YBhg Dato' Dzulkifli as MATRADE's chief executive. His long-standing experience in industrial cooperation and trade promotion makes him an ideal choice for advancing Malaysia's oil & gas services and equipment (OGSE) industry in the international markets. We wish him the best and we are excited to see what the future holds.

MPRC PRESS RELEASE

MPRC APPLAUDS PLATTS' MOVE TOWARDS FOB STRAITS BENCHMARK

4 terminals approved by Platts as part of the free-on-board (FOB) Straits oil benchmark pricing; Tanjung Bin, Pasir Gudang, Tanjung Langsat, Pengerang.
Image credit: platts.com

Kuala Lumpur (3 July 2015): The Malaysia Petroleum Resources Corporation (MPRC) applauds Platts' recent move to approve four terminals in southern Malaysia as part of the free-on-board (FOB) Straits oil benchmark pricing.

With the introduction of the FOB Straits benchmark, as compared to FOB Singapore and FOB Malaysia previously, market participants will have broader options for loading terminals from which to meet an approved FOB Straits bid. As a result of this, all market participants will benefit from a more efficient and liquid market with more transparent price discovery.

A trader representing a top international oil trading company also stated that this will give traders more alternatives, providing a more conducive trading environment. "This will spur more investments into the region and it will provide the ease of doing business to traders, as a result of the FOB Straits' implementation," said the trader.

"We view this move as essential to the industry. We appreciate the fact that our terminals and facilities are being recognized internationally and are now involved in the benchmarking process of the price

“ This will spur more investments into the region and it will provide the ease of doing business to traders, as a result of the FOB Straits' implementation ”

assessments process for oil products," said Yazid Jaafar, Chief Executive Officer of the Johor Petroleum Development Corporation (JPDC), the master planner and coordinator of Pengerang Integrated Petroleum Complex (PIPC).

At the moment, the government is working closely with enforcement agencies to look at current policies and regulations in the industry, towards improving the ease of doing business in petroleum and petroleum products trading which would lead to more efficient businesses, reduced cost for traders and in return would benefit both Malaysia and Singapore.

Under the government's Economic Transformation Programme (ETP), the development of Johor's oil storage terminals could complement Singapore and together

elevate the region into a hub similar to the Amsterdam-Rotterdam-Antwerp (ARA). This would create a robust oil and gas value chain in the areas of refining capacity, independent storage and blending capacity as well as access to markets.

The Pengerang Independent Terminal equipped with deep-water facilities, started its operation in April 2014 and will boast a total storage capacity of five million cubic metres upon completion of all phases. Another oil terminal; Tanjung Bin, will undergo its second phase of expansion this August - expected to increase another 260,000 cubic metres of its storage capacity, as reported by VTTI recently.

UPCOMING EVENTS

REPRESENTING MALAYSIA AT OTC BRASIL AND WECP AGM 2015

Since its inception in 2011, Malaysia through MPRC has embarked on a substantial and ambitious plan to transform itself into an oil & gas services and equipment (OGSE) hub in the Asia Pacific region, one of the fastest growing regions in the world with a growing thirst for energy.

One of the major steps Malaysia has undertaken to leverage on its strategic location and propel market activity and investments is to establish linkages with major energy capitals. For the upcoming Offshore Technology Conference (OTC) Brasil 2015, the largest O&G exhibition and conference in South America taking place between 27-29 October in Rio de Janeiro, MPRC will actively promote the Malaysian OGSE sector and Malaysia as the OGSE hub in the region. Further to this, MATRADE will be organising a specialised marketing mission (SMM) to Brazil, followed by another SMM to Bogota, in a bid to establish linkages with these key South American markets.

Malaysia's vision as a regional OGSE hub is also in line with the World Energy Cities Partnership (WECP), a non-profit organisation which groups 22 international energy capitals including Stavanger (Norway), Aberdeen (Scotland), Houston (USA), Doha (Qatar), Rio de Janeiro (Brazil), and Perth (Australia) to facilitate business development as well as technology and knowledge transfer. Kuala Lumpur was officially recognised as a WECP city in 2014.

WECP's annual general meeting for the year will be held in conjunction with OTC Brasil, where mayors and representatives from the 22 energy cities will gather to discuss potential collaborations in areas ranging from economic development and environment to education and research. Panel sessions as well as working meetings with key oil and gas players will be organised on the sidelines of the AGM and OTC Brasil. A working visit to Petrobras and its Centre for Research is also currently part of the agenda, allowing delegates to learn more about Brazil's pre-salt discoveries.

“ The Kuala Lumpur delegation will be led by key officers from Kuala Lumpur City Hall and MPRC and will mark the city's first participation in WECP's AGM as a full-fledged member city. ”

OFFSHORE EUROPE 2015

CONFERENCE DETAILS:

SPE Offshore Europe Conference & Exhibition 2015

8-11 September 2015
Aberdeen, United Kingdom
www.offshore-europe.co.uk

The 2015 edition of the Offshore Europe conference and exhibition from the Society of Petroleum Engineers will be held from 8-11 September 2015, bringing together engineers, industry leaders, regulators and experts from around the world. The four-day event will see eminent leaders sharing insights and debating on issues pertinent to the upstream oil and gas industry, with presentations ranging from Europe's energy security for the future to financial investments in the oil and gas industry in an uncertain global environment. Technical conference sessions organised in conjunction with Offshore Europe will cover key issues such as developing talent to meet growing demand and effective management of offshore assets. The biennale event will also group over 1,500 Exploration and Production exhibitors, creating an opportunity for delegates and trade visitors to learn about the latest technological innovations, solutions and tools to operate in an increasingly complex and dynamic energy landscape.
